

# Get the Facts on the HPV Vaccine.

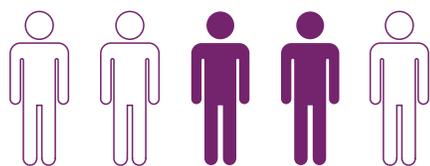

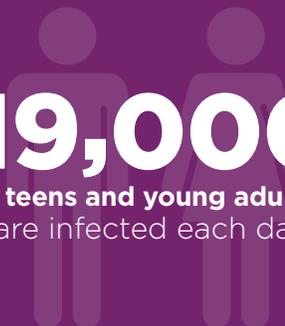

HPV is associated with cancers for both boys and girls.

**42 million Americans** are currently infected, with 13 million **NEW** people becoming infected each year.

**19,000** teens and young adults are infected each day.

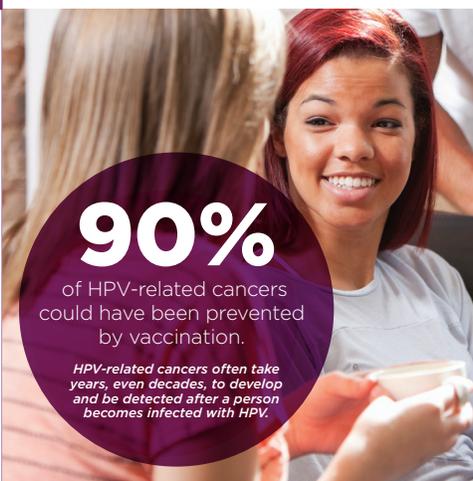

**Among 15 to 59-year-olds,** 2 in 5 people will become infected with HPV.

**90%**

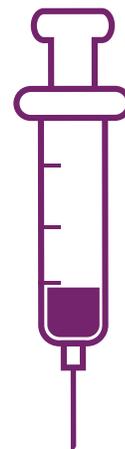

of HPV-related cancers could have been prevented by vaccination.

HPV-related cancers often take years, even decades, to develop and be detected after a person becomes infected with HPV.

The HPV Vaccine is safe and effective.

Over **1/4 of a billion** doses have been given.

UPMC Children's Community Pediatrics follows the recommendations of the Centers for Disease Control and Prevention as well as the American Academy of Pediatrics.

**Protect your child from the threat of cancer.** Know the facts about Human Papillomavirus (HPV).
