# UPMC Children's Hospital of Pittsburgh Division of Community Health

## **Pediatric Education Series**

#### Overview

The Pediatric Education Series (PES) is a free webinar series created by Children's Community Health Division, and Children's Professional Development and Education Committee. Monthly webinars by pediatric health specialists provide information and updates on topics that are relevant to professionals working in community, clinical and school settings, and include subjects such as trauma informed care, cardiac anomalies, working with transgender and expansive youth, and more.

#### **How it Works**

The Pediatric Education Series responds to requests by health care professionals, nurses in particular, for education on specific topics of interest and need. A hospital-based content expert shares the latest research and practice recommendations via a live webinar platform. Webinars remain available on Children's website for three months, <a href="http://www.chp.edu/health-care-professionals/nursing-education">http://www.chp.edu/health-care-professionals/nursing-education</a>, Nurses can earn up to 1.0 CEU upon completion of each webinar.

### Goals of the Pediatric Education Series

Professionals who take care of children are critical to their health and safety and to helping them establish lifelong healthy behaviors.

The Pediatric Education Series aims to:

- Provide professional education on topics that are relevant to meeting children's health care needs
- Increase healthcare professionals' knowledge of the most up-to-date research and practice recommendations in pediatric healthcare
- Increase clinical providers' awareness of education interests and needs among community-based healthcare professionals
- Improve connection and collaboration between clinical and community-based healthcare professionals

## About UPMC Children's Hospital of Pittsburgh Community Health

Children's Hospital of Pittsburgh Community Health works together with hospital, other healthcare, and community partners to improve health outcomes, reduce health disparities, and elevate quality of life for children and families in the communities where they live, learn, work and play.
