has the quickest wound
healing rate in the entire
UPMC system!

WOUND CARE

CLINICAL ROTATION INFORMATION

DESCRIPTION

Students work one-on-one with the Medical Director of the Hyperbarics & Wound Healing Center. Students receive hands-on clinical experience involving the following wound care pathways: diabetic foot ulcers, vascular ulcers, pressure ulcers, various infected wounds, and slow-healing post-surgical wounds. Students complete history and physical examinations, assist in surgical debridements, and discuss treatments and care plans the Medical Director.

GOALS & OBJECTIVES

BY THE END OF THE ROTATION, THE STUDENT WILL:

- Diagnose and initiate treatment of common wounds and wound conditions
- Integrate information gathered from patients into a justifiable differential diagnosis
- Conduct thorough, pertinent H&P research to identify appropriate wound treatment pathways
- Experience wound care procedures and treatments
- Generate initial diagnostic and therapeutic plans
- Identify appropriate patient diagnoses that meet criteria for hyperbaric oxygen therapy treatment

FACULTY

Marc Mancinelli, DO, FACCWS
Medical Director
UPMC Hamot Wound Care

EVALUATION PROCESS

An evaluation is completed by the course director at the end of the rotation. This evaluation is derived from the Medical Director's direct observations of the student throughout the student's clerkship at the Wound Center.

STUDENT TESTIMONIALS

"Staff is very knowledgeable and welcoming."

"Dr. Mancinelli is a great preceptor and is eager to teach about wound treatment, benefits and indications of hyperbaric therapy, as well as emergency medicine, given his background. His staff create a fun learning environment. This is a beneficial rotation to learn areas of medicine students are not often exposed to."

"Dr. Mancinelli is a great mentor: approachable, easy-going, and always ready with a question to get me thinking. I was able to work with a huge variety of patients and practice my Spanish speaking skills in the process. Overall, a great and hands-on experience."

WOUND SERVICES

UPMC Wound Healing Services at UPMC Hamot offers:

- Advanced reconstructive and limb salvage techniques
- Diabetes education
- Growth factor therapy
- Hyperbaric oxygen therapy
- Nutritional consultation
- Onsite radiology
- Onsite vascular testing
- Skin grafts
