

Fast Facts

UPMC Magee-Womens Hospital is a world-class center for both women's health and comprehensive medical-surgical care, and has been providing life changing medicine for more than a century. UPMC Magee is committed to providing superior health care to all our patients — women, infants, and men. We are also a regional and national leader in innovative women's and infants' health care and research.

Magee Overview

- We are the highest National Institutes of Health-funded obstetrics and gynecology department in the nation. Magee's investigative efforts are strengthened by consistently securing significant federal and private research grants.
- Our neonatal intensive care unit (NICU), one of the largest in Pennsylvania and in the country, treats more than 1,500 seriously or critically ill babies each year.
- We have one of the most advanced and sophisticated fertility preservation programs in the country. We are one of the only centers in the United States that processes and stores ovarian and testicular tissue as a standard of care, and one of the only centers with the ability to transplant frozen ovarian tissue.
- Magee offers the region's most comprehensive clinical genetic services, including reproductive, cancer, and adult genetic testing and counseling.

Magee Firsts

- We pioneered the use of digital mammography in 2000 when we became one of the first hospitals in the United States to install a clinical digital system. In 2006, Magee became one of the country's largest digital mammography centers when we converted all our remaining analog systems to digital.
- Our experts developed and performed the world's first microcoil embolization — a minimally invasive technique that targets tumors in utero, eliminating the tumor and the threat to both the fetus and the mother.
- A multidisciplinary team of specialists from Magee and UPMC Children's Hospital of Pittsburgh performed western Pennsylvania's first in-utero surgery to close an open neural tube defect (in this case spina bifida), in a baby months before her birth.
- Our Perinatal/Neonatal Substance Abuse Services offer the region's only outpatient medicine-assisted treatment program for treating pregnant women with substance use disorders.

Partners in Collaborative, Innovative Care

Magee practices medicine in a collaborative way that takes advantage of the resources and expertise of the entire UPMC system. Clinical integration is a cornerstone of how we ensure our patients get the best care, regardless of where they live.

UPMC Children's Hospital of Pittsburgh

Magee and UPMC Children's Hospital provide the highest level of care in such areas as high-risk pregnancy care, fetal diagnosis and intervention, and genetics — just a few of the more than 30 neonatal specialties available. Together, Magee and UPMC Children's Hospital represent both the region's highest level NICU and largest network of neonatal and pediatric specialists.

UPMC Children's Hospital is ranked ninth in the nation on the annual Honor Roll of America's Best Children's Hospitals (2021–22). The hospital is also ranked in all 10 specialties that *U.S. News & World Report* evaluates, including second in the nation for pediatric cardiology and heart surgery.

UPMC Hillman Cancer Center

The Magee-Womens Cancer Program is part of UPMC Hillman Cancer Center. This collaboration brings together leading experts in breast and gynecologic cancer care, offering innovative new therapies found through clinical trials.

Magee-Womens Research Institute

The internationally recognized Magee-Womens Research Institute (MWRI) is the largest research institute in the United States devoted exclusively to women's health. MWRI's diverse group of clinical scientists and investigators are affiliated with worldwide collaborative networks. They lead advancements for tomorrow's health solutions for women.
