

Burn Scar Treatment at UPMC Mercy

UPMC Mercy Burn Center offers a comprehensive treatment plan for burn scars through both laser- and light-based therapies. If you, or someone you love, are suffering from moderate to severe burn scarring, this emerging technology can provide hope.

Using state-of-the-art equipment, experts at UPMC Mercy Burn Center can personalize treatment to your scar type, optimizing safety and healing.

Highlights of this treatment plan include:

- Improved texture and pliability of the burn scar
- Decreased redness and itching
- Reduced need for burn scar excision

After a careful evaluation and discussion with you, we will recommend an individualized care plan. Multiple sessions, spaced several weeks apart, may be necessary depending on the severity of your scar.
